

AlliedWallet

Next Generation Integration

Allied Wallet's Next Generation Gateway offers a state-of-the-art Payment Gateway solution that allows merchants to accept payments with the latest features and functionality. Allied Wallet understands that many businesses do not have a web development team on hand for integrations and we strive to simplify the integration process.

Integration Methods

QUICKPAY

QuickPay features an Allied Wallet-hosted payment page that requires minimal coding.

CUSTOM PAY

Custom Pay offers a customizable payment page hosted by Allied Wallet with minimal coding required.

DIRECT API INTEGRATIONS

Our Direct API Integration allows merchants to connect directly to our API, but does require coding for integration.

TOKENIZATION API

By connecting directly to our Tokenization API, merchants take themselves out of the PCI scope. Our Tokenization API does require coding.

TOKENIZATION SCRIPT

Our Tokenization Script enables merchants to paste one line of JavaScript on their payment page / mobile app that takes themselves out of the PCI scope. Requires minimal coding.

MOBILE POS

Allied Wallet's Mobile POS solution allows merchants to accept transactions via our mobile app / POS device without any coding required.

SHOPPING CARTS

Our RESTful API and ready-built modules make integration simpler and in certain cases, require limited to no coding necessary. Beyond that, we offer free integration assistance to all merchants.

Integrating with Our Next Generation Gateway
